

FRAUDSIGHT FOR SMBs

Real-time fraud protection

With visibility into 40 billion transactions annually, FraudSight is a cutting-edge, in-authorization fraud detection and prevention solution that is powered by world-class machine learning and managed by a team of highly experienced fraud specialists and data scientists.

Fraud has no boundaries

Merchant size, whether large, medium or small, does not matter when it comes to fraud—every merchant is at risk. In fact, many fraudsters will target smaller merchants primarily because many small and medium size merchants do not have the IT infrastructure in place to implement an effective fraud prevention and detection solution. Because of this, small and medium sized merchants are increasing their fraud risk exposure when fraud detection and prevention measures are not in place.

small businesses reported
with payment fraud**

EMAILAGE, 2019

DATA

Visibility into card-present and card-not-present data across 40B transactions annually, plus millions of confirmed fraud transactions.

EXPERIENCE

An experienced team of data scientists and fraud analysts with years of experience in fighting fraud in the merchant and financial issuing space.

TECHNOLOGY

Leveraging world-class machine learning technology that dynamically monitors transactions in real-time during the authorization process.

The time is now for payment fraud protection

FraudSight, Worldpay from FIS' flagship fraud prevention and detection solution has done the heavy lifting for you making integration for your business completely seamless and cost effective. FraudSight provides fraud protection for high-risk (i.e., non-EMV or card-not-present) transactions made at your business by **analyzing transactions for fraudulent activity and declining transactions in real-time** when significant risk is found.

Let us help you focus on doing what you do best—running your business.
